CLOUD SECURITY SERVICES

Test Your Cloud Before Threats Strike

In today's dynamic threat landscape, cloud environments are often targeted by sophisticated adversaries exploiting misconfigurations, insecure applications, and inadequate monitoring. Lares provides comprehensive Cloud Configuration Reviews, Web Application Penetration Testing, and Risk Assessments designed to identify vulnerabilities, strengthen defenses, and ensure compliance.

Our team emulates real-world attack scenarios to uncover hidden risks in your cloud infrastructure, enabling you to build a resilient and secure environment.

Let Lares Be Your Guide...

With over a decade of experience and a legacy of cybersecurity innovation, Lares is a trusted partner for securing cloud environments. As pioneers of Red Teaming and the Penetration Testing Execution Standard (PTES), we deliver tailored, actionable solutions to address your unique risks while fostering collaboration and knowledge-sharing with your team. Our holistic approach combines technical assessments, strategic risk evaluations, and compliance readiness to strengthen your defenses and ensure continuous security improvements.

CLOUD SECURITY OFFERINGS

Configuration Reviews

- Evaluate security controls and configurations in your cloud infrastructure.
- Recommendations for compliance and regulatory standards

Web Application Penetration Test

- Simulate real-world attacks to identify vulnerabilities in APIs, web apps, and services.
- Test for risks such as injection attacks, misconfigurations, and broken access controls.
- Deliver actionable remediation strategies to secure applications

Risk Assessments

- Conduct thorough evaluations of cloud security controls and governance.
- Measure exposure to advanced threats, including insider risks and ransomware attacks.
- Provide a roadmap to align your security program with business objectives.

Potential.

CLOUD SECURITY OFFERINGS

Advanced Threat Simulation

Lares conducts tailored simulations of advanced attacks specific to cloud environments, replicating the tactics and techniques used by sophisticated adversaries. These simulations include scenarios like privilege escalation, lateral movement, and data exfiltration, testing your environment's ability to detect and defend against real-world threats. This service provides invaluable insight into the resilience of your cloud infrastructure, empowering your team to proactively strengthen defenses against modern attackers.

Cloud Identity and Access Management (IAM) Assessments

Lares performs a comprehensive evaluation of your cloud IAM configurations to ensure your permissions, roles, and policies are secure and aligned with the principle of least privilege. We identify excessive or unused permissions, insecure access keys, and gaps in user account management. By tightening access control mechanisms, we minimize the attack surface, reducing risks from compromised accounts or insider threats, while maintaining operational efficiency.

Infrastructure-as-Code (IaC) Security

With the growing use of automation in cloud deployments, Lares reviews your Infrastructure-as-Code (IaC) templates, such as Terraform or AWS CloudFormation, to ensure configurations are secure before deployment. This proactive assessment prevents misconfigurations that could expose your systems to vulnerabilities. Our recommendations empower your DevOps teams to adopt secure-by-design practices, ensuring security is embedded into your infrastructure from the outset.

API and Microservices Testing

Lares specializes in testing APIs and microservices that are critical to cloud-native architectures. We uncover vulnerabilities in authentication mechanisms, access controls, and data handling processes that could expose sensitive information or create an entry point for attackers. By securing these essential components, we help ensure the integrity and reliability of your cloud-hosted applications and services, which are vital to your business operations.

About Lares

Lares is a security consulting firm that helps companies secure electronic, physical, intellectual, and financial assets through a unique blend of assessment, testing, and coaching since 2008.
